

DigiScribe-XL

POWER. FLEXIBILITY. SCALABILITY. CONTROL.

Why Opt for Digital Dictation Processing?

Do you really have to yield to increasing tape management headaches and resulting lost dictations? And are the new digital hand recorders any better without workflow and reporting? Should Transcriptionists spend more time handling tapes than typing reports? Not if your office is equipped with digital voice processing, a technology from which more and more companies are able to extract immediate business advantages. 'CD' sound quality, hassle-free dictation, improved efficiency: these are the benefits most commonly agreed upon, though just a sample of the real promise of digital dictation. See how **DigiScribe-XL** delivers it all.

Excelling to Your Preferences

Authors - Whether you work from the office or are on the move, prefer making more use of your personal computer or a mobile device, we have just the solution to meet your preferences. Our personal computer-based solution **DigiDictate-IP** runs on your desktop and over your LAN / WAN to provide you with a new dictation experience providing total control over the process. You can even take **DigiDictate-IP** on the road with you through the use of a notebook computer and remote connections such as the Internet so that your dictation can be processed while you're on the road.

Our portable mobile solution allows you to dictate from virtually any location, using a wide range of digital handheld recorders including Olympus, Philips and Sanyo models. Should you wish to dictate directly onto your Pocket PC, Crescendo offers **DigiDictate-CE**, an application specially designed for Pocket PC dictation. Crescendo also supports digital dictation in its simplest form: telephone dictation, where land lines or mobiles can be used to input, control and edit dictation.

So no matter what your preference is, desktop or mobile, our solution guarantees that your dictation can be effortlessly entered and controlled by saving you minutes per day. Once completed, you can ensure that your dictation is routed to the appropriate Transcriptionist for proper attention and you can even prioritize it. Besides, our voice management system can retain your original dictation long after it has been committed to paper, so that you can refer to what was actually said.

DigiScribe-XL is a real-time, voice-on-demand network dictation and transcription solution particularly suited for dictation-intensive environments, due to its high level of client customization, workflow logic and interfacing possibilities.

voice Management

Transcriptionists - The DigiScribe-XL transcription solution allows you to transcribe from your personal computer whether you are in the office or at home, using a local/wide area network or simply via the Internet. Moreover, thanks to DigiPlayer-IP, you can play dictations in real-time mode without having to download files manually: voice streaming technology allow voice files to be played while they are still being downloaded, paving the way to significant improvements in turnaround of Client documents.

This easily configurable application allows you to see a job list in order of predetermined rights and priority settings. Critical information about each job is systematically displayed on your Dictation Selection and Control screen including Subject matter, Author ID, length, Work Type, priority, backlog and much more. You can also benefit from total fingertip control, including volume, tone corrected speed, job suspension and Microsoft Word automatic template pull up.

Control

DigiScribe-XL provides a management console that facilitates access to all dictation and system parameters, based on user rights, from any network or remote personal computer. The DigiConsole Master View provides critical job information at a glance allowing for complete management control. High priority jobs are color coded in order for them to be recognized immediately by the viewer. By right clicking on a job directly from the Master View, the voice can be played, batch functions can be applied and job properties can be accessed and edited. Thanks to unique routing capabilities, the system can indeed schedule and route jobs as per any criteria: Author, Secretary, Work Type, Department, and more. As a result, more control can be gained over the workflow environment and productivity levels. Alarms can also be set to automatically change the priority of a dictation should it exceed its turnaround or trigger time, ensuring that no deadline is missed. DigiConsole also offers extensive management information through its reporting option, issuing turnaround data, summaries and trend analysis.

Security

With DigiScribe-XL, voice files are not duplicated anywhere: one single copy is stored in a main data repository from which it can be tracked, retrieved, and routed to the appropriate Transcriptionist or team. And with a security proven in compliance with the most demanding confidentiality standards and protocols, DigiScribe-XL is the most reliable answer when it comes to sharing sensitive data among individuals, departments and cross-regional locations.

Voice Recognition

Crescendo now offers back-end voice recognition through Crescendo Speech Processing, a turnkey solution that produces recognized text out of off-line voice files. Crescendo Speech Processing is perfectly suited for structured, intensive dictation environments, institutions having difficulty hiring Transcriptionists as well as areas where a better turnaround is required. Built on top of the leading, proven SpeechMagic™ technology from Philips, which supports 22 recognition languages and relevant specialty ConTexts, Crescendo Speech Processing guarantees an individual dictation and speech recognition solution adapted to your specific needs while increasing its performance through repeated group use, from the support of phrases and variants to the adaptation of hesitations, non-speech and redundant phrases. With such a robust technology background, Crescendo allows your organization to take a big productivity step towards the fast and cost-effective creation of documents.

Looking to the Future...

Leverage your existing investment! Both Crescendo Speech Processing and DigiScribe-XL were designed to seamlessly integrate within your existing infrastructure - including other vendors' systems - thereby allowing significant cost savings on equipment. But a Crescendo solution would not be a Crescendo solution without its famous modular approach: a truly flexible solution for your firm to grow into, starting with the modules that you need now and then adding more as your business further expands.

So digital voice processing does not just translate into short-term benefits. Beyond the advantages of a user-friendly dictation process, changes in workflow are incomparable and pave the way to an efficient, error-free business environment, the foundations of which are already in place with the resources you have built up. Your previous investment is secured and with a return on investment within months of purchase, the benefits of your new digital dictation solution can be expected much sooner than you thought!
